

Session Title: Science Based Agriculture

Name: Chris Argent

Position: Head of Business Sustainability, APAC, Syngenta

Abstract title: Technology and digital innovation for sustainable agriculture

Farmers around the world are increasingly impacted by climate change and at the same time, agriculture is one of the contributors to GHG emissions. With a growing population driving more demand for food, fiber and fuel, science and technology is critical to help farmers continue growing crops efficiently while taking care of our planet. With digital solutions, farmers are taking strides towards sustainable agriculture. Digital tools can enhance agronomic knowledge, enable better decision-making and resource use efficiency, and generate higher yields. The increasing adoption of new technology will change the way we grow our food and manage the land.
