

**Session Title: CO<sub>2</sub> Removal**

**Name: Lori Guetre**

**Position: VP Business Development, Carbon Engineering Ltd.**

**Abstract title: Direct Air Capture of CO<sub>2</sub>: Helping to Achieve Net-Zero Emissions and Onward to Climate Restoration**

We believe we can create a future in which our children and neighbors inherit the same planet we've enjoyed; where we deliver prosperity and well-being while avoiding environmental impact. At Carbon Engineering, our contribution to this future is a Direct Air Capture technology that can capture CO<sub>2</sub> directly from the atmosphere at very large scale and at very low cost.

We believe that DAC will be a key climate workhorse in the decades to come - helping the world achieve net zero and then move onward to climate restoration and back to safe levels of CO<sub>2</sub> in our atmosphere.
