

Session Title: Women for Clean Energy Innovation

Name: Matsuno Ayaka

Position: Director, Gender Investment and Innovation Department, the Sasakawa Peace Foundation

Abstract title: Gender Diversity and Climate Innovation

Women can be mobilized in a more proactive manner in order to accelerate innovation for clean energy and climate change countermeasures.

If the influence of gender diversity on a firm's climate action and innovation were to exist, a compelling argument could be made for firms to increase their efforts in gender diversity in order to achieve better environmental performance and innovation towards long-term sustainability.

In pursuit of presenting such evidence, SPF partnered with Bloomberg New Energy Finance to explore the correlation between gender diversity in the workplace, and a firm's efforts toward climate action and innovation capabilities, among large listed corporations around the world.
