

Session Title: Growing Renewable Energy and Grid Stabilisation

Name: Satoshi Morozumi

Position: Senior Researcher, Smart Community Department, New Energy and Industrial Technology Development Organization

Abstract title: Discussions on new issues arising from higher penetration of renewable energy on the power systems

Along with the higher penetration of renewable energy, several new challenges are emerging in power system management beyond simple balancing.

In this presentation, reduction of inertia in grid systems, active power flow management and other new challenges surrounding power system dynamics will be comprehensively discussed.
