

Session Title: Renewable Microgrid and Energy Access

Name: Tareq Emtairah

Position: Director, Department of Energy, United Nations Industrial Development Organization (UNIDO)

Climate change, stress on natural resources, as well as geo-political factors are only some of the many forces re-shaping today's energy industry. While many challenges exist, there are also many opportunities being driven by factors such as technological change, business model innovation and the participation of new actors within traditional energy markets and infrastructure.

In this presentation, we draw on the specific experiences and lessons learnt from various UNIDO technical cooperation projects to highlight insights of specific challenges and opportunities facilitating micro-grid penetration while securing sustainable energy access in developing countries.
