

Session Title: Inclusive Action towards a Net-zero Emissions Future

Name: Robert B. Weisenmiller

Position: Chair, California Energy Commission

California's greenhouse gas emissions only make up 1 percent of total emissions globally. Partnerships with other countries and subnationals are key to helping stave off catastrophic climate change. We have successfully demonstrated that it is possible to drive the economy greater than the national average while also suppress carbon emissions (we met our goal of 1990 levels 4 years early). Moving forward however we need to target the sectors that have not been performing as well. Our focus must be on decarbonizing the transportation sector since it makes up 50 percent of our emissions.
