

Session Title: Grid Integration of Renewables

Name: Jens Jæger

Position: Policy & Business Development Manager (Asia)

This presentation will focus on two key elements of the renewable energy transition in emerging countries.

Firstly, it will highlight technological innovations from ARE Members, which contribute to the efficient use and stable supply of renewable energy in remote areas. These technologies include control systems, smart metering, and payment systems for renewable energy micro-grids.

Secondly, the presentation will highlight business models for renewable energy projects in remote areas of emerging countries, as well as key considerations and models when integrating such projects with the main electricity grid.

The presentation will draw upon experiences from ARE Members in over the last decade in especially South-East Asia, Sub-Saharan Africa and Latin America.
