

Session Title: E-Mobility in Sharing Services and Fleets

Name: Tom White

Position: General Manager, JUMP North Asia, Uber

The more transportation modes people have at their fingertips, the easier it becomes to get around without owning a car. Even with the convenience of ridesharing, many trips can be faster or cheaper on an e-bike, e-scooter or public transportation. Uber's mobility platform provides these reliable and affordable alternatives to personal car ownership. Putting e-bikes, e-scooters and public transportation access in Uber's app is part of our vision of Uber becoming a one-stop shop for all transportation needs. To be a true transportation platform, we need to provide access to every option that helps make a city move.
