

Session Title: Climate Communications

Name: Yasuko Kameyama

**Position: Deputy Director, Center for Social and Environmental Systems Research,
National Institute for Environmental Studies**

Technological innovation does not lead to social transition without people's involvement. Climate communications in Japan had been mainly confined into energy issue, such as "energy efficiency" and "energy saving". This was insufficient for the Japanese people to recognize underlying problem and to consider actions that should be taken by them voluntarily. Change of mindset of the people and business sector is sought for.
