

Session Title: Energy Productivity through IT and AI

Name: Shunichi Amemiya

Position: Head of Research and Development Headquarters, NTT DATA Corporation

In the era of connected world it becomes easier to utilize various data generated from devices and there is huge potential to solve social issues such as traffic congestion, CO₂ emission and energy management etc. by sharing and analyzing these data. I will share use cases and challenges how to utilize advanced technology (e.g. data analytics, artificial intelligence and blockchain) to solve social issues.
