

**Session Title: Energy Productivity through IT and AI**

**Name: Tatsuya Noguchi**

**Position: President & Representative Director, ABB Bailey Japan Limited**

Emerging digital technology of AI and IoT can help making our life and business explore in the next level of dimension with better energy efficiency. One of good examples is the development of smart cities and this is the topic for discussion.

In European environment, cities are facing different challenges and how can digital technology help resolving them and adding value, for the benefit of citizens, communities and industries.

Engagement of greenhouse reduction is a public agenda and how cities are taking steps to meet expectations of citizens, together with companies like ABB.
