

Session Title: Green Hydrogen Global Network

Name: Kazuhiro Fukazawa

**Position: Executive Vice President, Advanced R&D and Engineering Company,
TOYOTA MOTOR CORPORATION**

Expectations for hydrogen as a sustainable-society energy source are increasing. The Japanese government's long-term decarbonization strategy includes the establishment of a hydrogen-based society. Toyota's medium-term to long-term environmental goals have been set forth in the Toyota Environmental Challenge 2050. To achieve a hydrogen-based society, Toyota has introduced the Mirai FCEV, developed commercial FCEVs, and is planning full commercialization of its FCEV systems to expand hydrogen demand. Toyota intends to actively participate in a low-carbonization project that encompasses the entire hydrogen supply chain. With an open stance and evermore diverse partners, Toyota seeks to accelerate the dawn of a hydrogen-based society.
