

Session Title: Industrial Decarbonization

Name: Julien Perez

Position: Vice President Strategy & Policy, OGCI

Abstract Title: Catalysing actions to lower carbon industry

To meet the Paris Agreement goals, the world has to reach net zero emissions as early as possible. Energy represents 2/3 of manmade GHG emissions, and oil & gas fill more than half of energy needs. Most models predict that this should remain for the upcoming decades. As such, energy companies have an important role to play in accelerating the transition towards low carbon, alongside governments, civil society and other stakeholders, while continuing to provide reliable, accessible and affordable energy for all. OGCI gathers 13 companies, representing 30% of global oil and gas production, under the same CEO-led ambition of catalyzing meaningful decarbonization actions on the energy, transport and industry value chains.
